Lab 8

Assignment 1

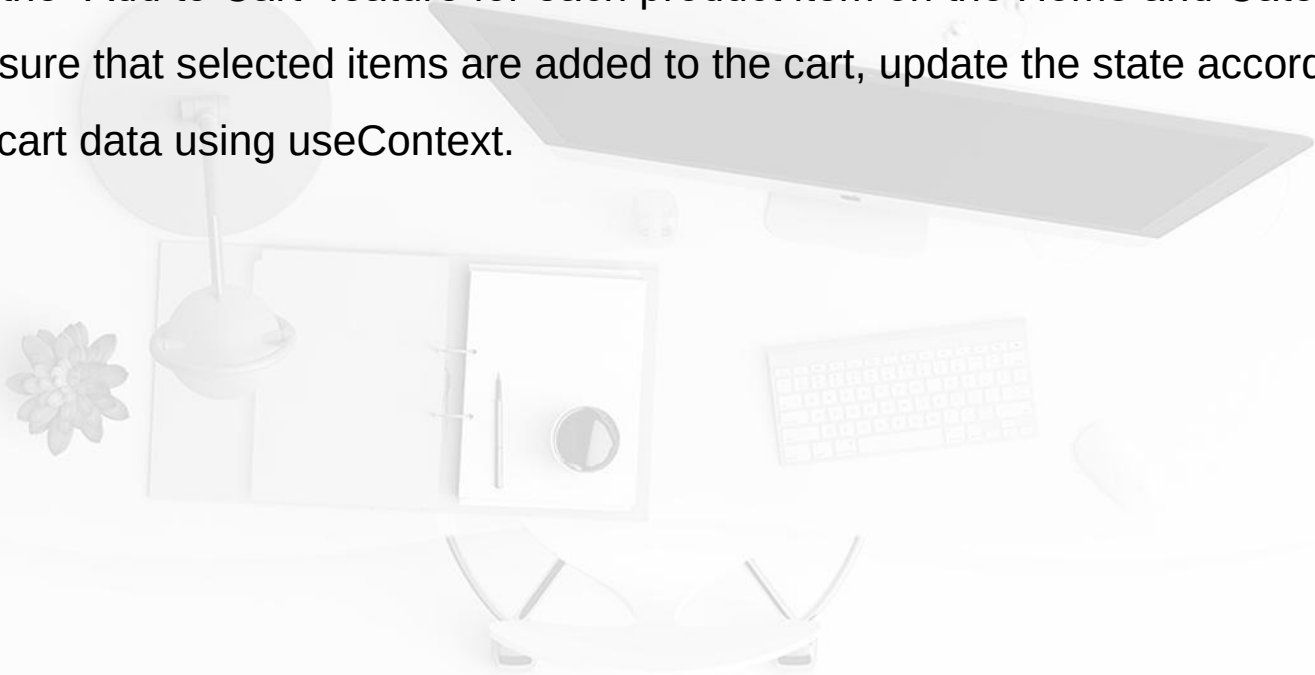

- Install and configure JSON Server to manage different types of data: users, product categories, and the product list.
- The database names are User, ProductCategories, and Products, respectively.

Assignment 2

- Complete the “Log in” feature.
 - Get the username and password from the “Log in” form,
 - Validate the credentials, and update the necessary details in useState,
 - Share them via useContext.

Assignment 3

Complete the “Add to Cart” feature for each product item on the Home and Category pages. Ensure that selected items are added to the cart, update the state accordingly, and share the cart data using useContext.

Assignment 4

Complete the product categories management features.

- Require user confirm before deleting an item.
- Use both Fetch and Axios to send requests to JSON Server.
